

The booking, start to finish

Every stage an event moves through inside Concierge, from the first enquiry to the final invoice — who acts at each step, and whether it happens on its own or waits for a person to check it.

Actor

CLIENT

STAFF

SYSTEM

Mode

● Manual — a person decides

● Automatic — happens on its own

No double-booking, ever

Enforced by a database constraint on the bookings table itself — not application logic that could have a gap in it.

Nothing emails itself

Every document, invoice, and wizard link waits for a staff member to click Send. The wizard's two auto-send switches exist, but both ship off.

Every change is logged

Status moves, sends, views, signatures, payments, overrides — each writes a permanent, timestamped line to that booking's own history.

01 Enquiry capture

Every booking starts life as an enquiry, however it arrives — a web form, a phone call, or a lead from iVvy — and lands in exactly the same pipeline.

CLIENT

● Manual

Fills out the public enquiry form at /enquire — event type, date, guest count, comments.

STAFF

● Manual

— or — keys in a lead taken by phone, walk-in, or direct email from the dashboard's New Booking form. Same intake, same rules either way.

SYSTEM

● Automatic

Matches the contact against existing records and creates the booking at status **Enquiry**, in the placeholder Unassigned space until a room is confirmed.

SYSTEM

● Automatic

Runs the classification rules and flags anything that needs a human before it goes further:

A generic "Birthday" with milestone unconfirmed · an 18th (Saturday 18ths need Aaron's sign-off) · a vague event type · missing guest count, adult/minor split, or date · a Wednesday/Thursday request against the 9pm trading close · an accessibility mention checked against actual space capacity · a guest count over every room's capacity · a possible duplicate contact.

CLIENT

● Automatic

Sees an immediate thank-you confirmation page. Nothing is emailed to them yet — every flag above just waits in Triage for a person to actually read it.

02 Triage

A self-clearing staff worklist — an entry drops off the moment the thing it's asking for gets done, never a box to tick separately.

STAFF

● Manual

Needs clarification — every still-open enquiry carrying an unresolved flag. Staff read it, contact the client, update the booking.

STAFF

● Manual

Awaiting space & time — an imported or newly captured booking with no real room assigned. Staff give it a space, a time, and a date if one's still missing.

The instant a real space is assigned, the booking is subject to the double-booking constraint for the first time.

STAFF

● Manual

Unrecorded minimum reduction — the agreed guest minimum differs from the space standard with no reason on file. Staff

record why, or correct it back to standard.

STAFF

● Manual

Flagged, in progress — a flag raised at enquiry time that's still unresolved after the booking has moved on. A flag never clears itself just because the booking progressed.

STAFF

● Manual

Wizard-ready — bookings that have crossed 14 days out with deposit paid and agreement signed. Staff send the Guided Booking Wizard link — see Phase 7.

03 Status & the calendar

The booking's own lifecycle, and where a room actually gets held.

STAFF

● Manual

Move the booking forward — **Enquiry** → **Offered** → **Tentative** → **Confirmed** → **Completed**, or divert to Dead / Cancelled.

Every move is checked against a legal transition map automatically — an illegal jump is rejected outright, not silently allowed.

STAFF

● Manual

Place a **hold** directly at Tentative to block a date for a client before any formal enquiry exists — same double-booking protection, no exceptions.

STAFF

● Manual

Link a second physical space to one real event — an afterparty room, say — rather than inventing a fake combined space.

Its status then rises and falls with the parent booking automatically: confirm the event, both rooms confirm; cancel it, both release.

SYSTEM

● Automatic

Every one of these moves writes to the booking's permanent audit trail — who, when, old value, new value.

04 Policy calls

Three exceptions the wizard's own design assumes exist somewhere — all staff-only, all logged, none silent.

STAFF

● Manual

Confirm early setup access — a client request for access earlier than the 2pm standard is a pending request until staff explicitly confirm it. Never auto-promised.

STAFF

● Manual

Reduce the guest minimum — only ever on Aaron's explicit approval, with a reason attached.

Blocked automatically without a reason on file the moment it differs from the space's standard minimum.

STAFF

● Manual

Grandfather an outside cake — off by default on every booking; only Aaron can flip it for a client he's already agreed with.

05 Agreement & BEO

Documents move through the same draft → sent → viewed → signed pipeline whether it's the client-signed Agreement or the kitchen-and-floor-facing Event Order.

STAFF

● Manual

Generate a draft from the real booking data.

STAFF

● Manual

Preview it privately before it goes anywhere.

A staff preview never counts as the client having seen it — the two are tracked separately on purpose.

STAFF

● Manual

Send it — pastes the resulting link into their own email to the client.

Guarded automatically — a send is refused outright if the booking has no contact with a valid email address on file. The status can never claim "sent" when there's genuinely nowhere for it to have gone.

SYSTEM

● Automatic

Client's first open of the link is timestamped the moment it happens.

CLIENT

● Manual

Reviews the Agreement and clicks **Accept & Sign**.

Signature name, IP address, and timestamp are captured automatically the instant they click.

06 Deposit & invoicing

Money in, tracked to the cent, with GST and any lawful card surcharge worked out automatically rather than by hand.

STAFF

● Manual

Create the deposit invoice, then send it — same valid-email guard as any document.

CLIENT

● Manual

Opens the invoice link, pays by bank transfer or card, off-platform.

Opening it timestamps automatically but never changes its status — a viewed invoice is still exactly as unpaid as before, right up until the balance actually clears.

STAFF

● Manual

Record the payment received.

SYSTEM

● Automatic

Totals every payment against the invoice — splits from more than one payer are fine — and flips it to **Paid** the moment the balance clears. GST breakdown and any lawful card surcharge are computed the same way, every time.

STAFF

● Manual

Later, a final invoice can be raised the same way — deposit already paid is credited automatically so a client is never double-charged.

07 Guided Booking Wizard

The client's own step-by-step planning session, offered once the event is close and the fundamentals are settled.

SYSTEM

● Automatic

Surfaces the booking as wizard-ready once it's within 14 days of the event, deposit is paid, and the agreement is signed.

STAFF

● Manual

Send the wizard link from Triage.

CLIENT

● Manual

Works through five steps at their own pace, autosaving as they go — nothing is lost if they close the tab halfway through:

Basics — *times and guest count, checked live against trading hours and setup-access rules* · **Food** — *platters and pizzas, priced live from the catalogue* · **Beverage** — *bar structure and limit* · **Music** — *playlist or DJ* · **Extras** — *cake, dietary needs, décor, accessibility.*

SYSTEM

● Automatic

An accessibility need raised against a room that isn't wheelchair-accessible escalates immediately for Aaron's attention — never just logged as a note.

CLIENT

● Manual

Reviews everything and submits.

SYSTEM

● Automatic

Builds the real Event Order and final invoice on the spot from the client's actual answers, then checks whether the submission is **clean** — every step complete, every item priced, no accessibility escalation, no invoice already on file for this booking.

Clean submissions still wait in draft for a staff Send by default — the two settings that would auto-send them are Aaron's own switches, and both ship off. **Anything not clean always waits for manual review, with no exceptions** — a dirty submission can never route around a person.

CLIENT

● Automatic

Lands on the real confirmation screen — submitted for the team's approval, Event Order and final invoice to follow by email.

08 Staff review & final send

The check the wizard was built around — nothing generated by a client's answers reaches them again without a person reading it first.

STAFF

● Manual

Open the private preview of the generated Event Order and invoice — the client's actual notes, dietary needs, and any accessibility flag, exactly as submitted.

STAFF

● Manual

Regenerate if anything's changed, then send — the same guarded path as any document or invoice.

CLIENT

● Manual

Receives their Event Order and final invoice, opens and pays exactly as in Phases 5 & 6.

09 Event day & close-out

The last two moves in the booking's life.

STAFF

● Manual

Move the booking to **Completed** after the event runs.

Any linked second space completes with it automatically — same room, same event, one decision.

A cancellation at any stage is always a deliberate staff decision, always logged with a reason — never automatic, never silent.

+ Worklist reference

Where each automatic count on the dashboard and each Triage section actually comes from.

WORKLIST	CLEARs WHEN...	WHERE IT'S SHOWN
Open enquiries	<i>booking moves past Enquiry status</i>	Dashboard count
Needs clarification	<i>every flag on the booking is resolved, or the booking moves past Enquiry</i>	Triage
Awaiting space & time	<i>a real bookable space and time are assigned</i>	Triage · Dashboard count
Unrecorded minimum reduction	<i>a reason is recorded, or the minimum is reset to the space standard</i>	Triage
Flagged, in progress	<i>the booking reaches a terminal status (Completed / Cancelled / Dead)</i>	Triage
Wizard-ready	<i>a wizard session is submitted for the booking</i>	Triage · Dashboard count
Unpaid invoices	<i>the invoice is fully paid</i>	Dashboard count

Meantime Concierge · internal operations reference · reflects the booking pipeline as deployed to production.
